

SUBOXONE (Buprenorphine) TREATMENT NOW AVAILABLE AT NHS LANSDALE

NHS Human Services is committed to providing the most up-to-date and comprehensive treatment for opiate addiction.

It is recognized that not every client struggling with opiate addiction is a candidate for Methadone Maintenance or detoxification with Methadone. **SUBOXONE** offers an alternative form of treatment to those clients who are considered appropriate and who meet the criteria for admission to the **SUBOXONE** Program. **SUBOXONE** is prescribed as part of a comprehensive, multi-disciplinary approach that will be used as a therapeutic tool to assist clients in the process of recovery.

SUBOXONE treatment is now available at NHS Lansdale, for individuals that meet the program's admission criteria and have Health Choices Insurance (Medicaid).

We complete prior authorizations for the medication and bill insurance, so there is **no cost** to the patient.

Please call NHS Montgomery County's intake department at 215-631-7827 to learn more.

NHS complies with all applicable Federal, State and local ordinances, statutes and regulations regarding prescribing, storing, dispensing and administration of Buprenorphine.
